

Sir, I am against HR 4026 which would prevent satellite radio from providing weather and traffic.

People want to know the weather and more importantly the traffic report with out delay. In Philadelphia the news station is an AM station that gives thr traffic every 10 -15 minutes. Of course, you have no guarantee that the report is decipherable over the buzz, whistle and hum that is AM radio. Also, when I am driving and it seems that traffic is slowing -- I want to know now, not in 10 or 15 minutes when I am completely boxed in by traffic. Forget about the FM stations. They offer the traffic report whenever they feel like it (if at all).

Keep weather and traffic reports on Satellite Radio!
